

BEACONMEDAES®

Envirom™ V Sys Headwalls

Improving the patient environment is the key driver behind the design of the Envirom headwall systems. The use of high-pressure laminate fascia panels opens up new possibilities to enhance ward decor. Envirom headwalls also provide a cost effective method of installing a wide range of services in a single factory built and tested unit.

A Solution for Every Area

Envirom headwalls are ideally suited for general and intermediate acuity care areas in the hospital, especially those requiring a large number of services to be close to the patient bed. For high acuity areas of the hospital please see our brochure detailing Coronus and Atlas Ceiling Pendant Systems.

Key Features

- Superior aesthetics enhance the ward environment
- Huge service carrying capacity, with room for future expansion
- Supplied factory pre-piped, pre-wired and fully tested
- Robust extruded aluminium sections
- High strength - can provide support for monitor arms, shelves, IV poles, infusion pumps etc.
- Integral and retrofittable medical rails

*Life
is in the
details.*

Superior Aesthetics

There is a strong emphasis on improving the patient environment in modern hospital design. The way a patient feels is affected by many factors, including the environment they are in. Careful selection of colour, textures and lighting schemes within the patient environment have been proven to aid the recovery process.

Envirom Headwalls are supplied with high-pressure laminate fascia plates, so the bedhead system can compliment any chosen decor, enhancing the patient environment. This makes the ward ambience less clinical, and more inviting, homely and relaxing.

A Range of Options

There are two standard widths of headwall, called V Sys (widest) and NV Sys. Due to the substantial service carrying capacity of the V Sys, it is possible for a single headwall to supply two patient bedspaces, one either side of the unit.

In addition to the headwall system, luminaires can be provided for general illumination, reading and examination lighting. Please see our separate brochure for more information. We also have a range of bedspace management accessories to help you maintain a safe and efficient working environment.

Totally Configurable

Each headwall is custom manufactured to your specific requirements. Our team of designers provide expert advice and support, and will even help you to develop specifications for your project.

Hospitals all over the World have benefited from the Envirom headwall system. It is possible to fit virtually any manufacturers medical gas terminal units and electrical sockets to any national standard, as well as medical rails, nursecalls, data sockets, telephone jacks, switches, equipotential earth sockets etc.
